

Consulting

Our experts will gladly share their knowledge with you.

Throughout the many years of working in various business fields, we were often faced a wide range of challenges and we grew with each individual one. Our experts will gladly share the knowledge and experience that we were able to gain in this process.

Operational safety & operational ergonomics

We are the right partner to create the best possible working environment for your employees and to ensure maximum safety. As a recognised safety expert in Germany and Austria, we analyse existing working environments and compile suggestions for improvements. We will gladly complement these by manufacturing appropriate equipment and auxiliary materials.

Process optimisation

From the establishment of a quality management system to measures to boost the efficiency of suppliers – take advantage of our external expertise and optimise the whole process chain of your company beyond its own boundaries. Furthermore, we will gladly advise you on the initial evaluation of customers and ensure improvements as quick as possible in the course of negative experiences in customer audits.

Automotive standards

Our many years of experience in production facilities of the automotive industry throughout Europe makes us the ideal partner to implement, maintain and to develop standards in the area of quality assurance. We will guide you in the establishment of proven quality planning systems (Advanced Product Quality Planning), sampling serial parts (Production Part Approval Process), measuring the capacity (Run@Rate) and in analysing measurement systems (Measurement System Analytics).

Logistics & packaging

We will gladly advise you on how to optimise the quality of the packaging and to prevent damages during the entire logistical processes by using recognised testing procedures. Also in the implementation or development of manufacturing processes without a forklift. Through this, increase the safety conditions both for your employees as well as for your products.
