

Logistics

Solutions for logistical challenges

The department deals with logistical challenges, which in particular production companies face. Cost efficient and flexible solutions that are easy to put into practice are the objectives here through which our clients can measure our performance. Our knowledge and expertise in the improvement not only of production flows but also in the delivery of material, are down to our many years of experience in the field of quality management & process optimisation.

Process optimisation

To ensure the product is not only delivered in an optimal quality, but also at the right time and in the right order, we will gladly assist you in the organisation and optimisation of a uniform flow of parts. Worldwide and across sectors. Proven approaches ranging from just-in-time to just-in-sequence processes, will ensure quick handling of materials, parts and modules. This will allow you to save capacities and in turn also minimise your logistic costs

Development of packaging / packaging approval

We will assist you in the development of all types of packaging – including for hazardous goods. Whilst taking the cost efficiency factor into consideration, we carry out quality-related analyses of packaging systems, advise you on how to prevent damages and optimise the overall logistical process – resulting in noticeable cost savings.
